

DESCRIPTION:

Rymax E10 Fuel Treatment is a specialized fuel treatment formulated to counteract the detrimental effects of ethanol-based fuels like E5 and E10. This advanced formula provides essential lubrication for valves and fuel pumps while shielding critical metal, rubber, and plastic components from the corrosive nature of ethanol. By stabilizing the fuel and preventing the buildup of gum and deposits, it revitalizes your engine's performance and ensures long-term protection for both modern and classic vehicles.

How to use?

This additive is suitable for all petrol engines running on E5 or E10 biofuels. It is specifically formulated to protect classic cars and older fuel systems from ethanol-related wear. Will not harm catalytic converters.

Direction

Pour the contents of one bottle into the fuel tank prior to refueling with petrol.

Dosage

One bottle treats 40 to 60 litres of petrol.

Recommended use: One bottle for every tank filling to ensure continuous protection and stabilization.

BENEFITS:

- **Ethanol Neutralization:** Effectively combats the adverse effects of ethanol (up to E10) to safeguard the fuel system.
- **Corrosion Protection:** Guards against corrosion on metal parts and prevents the deterioration of rubber and plastic components.
- **Fuel Stabilization:** Stabilizes ethanol-based fuels, preventing oxidation and significantly prolonging fuel life.
- **Valve Protection:** Prevents valve seat recession by providing the essential lubrication missing in ethanol blends.
- **Enhanced Combustion:** Eliminates engine knocking, rough idling, and hesitation for a smoother driving experience.
- **System Cleanliness:** Prevents spark plug fouling and the accumulation of dirt and gum within the fuel system.
