

DESCRIPTION:

Dione G-13 Ready-to-Use 50/50 is an ethylene glycol and glycerol based engine coolant and antifreeze developed for modern cooling systems used in VAG vehicles such as Volkswagen, Audi and Škoda. The formulation combines Organic Acid Inhibitor Technology (OAT) with silicate additives to provide reliable protection against corrosion, overheating and deposit formation. It is particularly suitable for cooling systems containing aluminum, cast iron, and magnesium alloys, helping protect radiators, water pumps, and other critical cooling system components from wear and corrosion.

When used according to manufacturer recommendations, it supports clean cooling system operation, helps prevent scale and sludge formation, and maintains effective corrosion protection for extended service intervals of up to 250,000 km or 5 years in VAG passenger vehicles.

NOTE:

Rymax Dione G-13 is a Ready-to-use coolant. This product is already pre-mixed with water and is ready to use, providing a permanent and guaranteed protection against freezing and excellent cooling.

PERFORMANCE LEVELS:

- VW TL-774 J (G13)

TYPICAL PROPERTIES

	Unit	50/50
Density 15 °C	Kg/m3	1083
Colour		Pink
pH		8.3
Freezing point	°C	-37
Boiling point	°C	111
